

CONTENTS

Foreword	i
Acknowledgements	iii
Contents	v

Papers

1. A co-chain map for the G invariant De Rham complex	1
<i>I.M. Anderson and M.E. Fels</i>	
2. New examples of trihamiltonian structures linking different Lenard chains	13
<i>C. Andrà and L. Degiovanni</i>	
3. Wave propagation in an elastic medium: GDS equations	22
<i>C. Babaoglu and S. Erbay</i>	
4. Parametric excitation in nonlinear dynamics	27
<i>T. Bakri</i>	
5. Collisionless action-minimizing trajectories for the equivariant 3-body problem in R^2	35
<i>V. Barutello</i>	
6. The Lagrangian and Hamiltonian formulations for a special class of non-conservative systems	43
<i>S. Benenti</i>	
7. Shadowing chains of collision orbits for the elliptic 3 body problem	51
<i>S. Bolotin</i>	

2

8. Similarity reductions of an optical model 59
M.S. Bruzón and M.L. Gandarias
9. Fold, transcritical and pitchfork singularities for
time-reversible systems 67
C.A. Buzzi, P.R. Silva and M.A. Teixeira
10. Homographic three-body motions with positive and negative
masses 75
M. Celli
11. Remarks on conformal Killing tensors and separation
of variables 83
C. Chanu and G. Rastelli
12. A regularity theory for optimal partition problems 91
M. Conti, G. Verzini and S. Terracini
13. Lambda and mu-symmetries 99
G. Gaeta
14. Potential symmetries and linearization of some evolution
equations 106
M.L. Gandarias
15. Periodic solutions for zero mass nonlinear wave equations 115
G. Gentile
16. Fundamental covariants in the invariant theory of
Killing tensors 124
J.T. Horwood, R.G. McLenaghan, R.G. Smirnov and D. The
17. Global geometry of 3-body trajectories with vanishing
angular momentum 132
W.Y. Hsiang
18. The relation between the topological structure of the set of control-
lable affine systems and topological structures of the set of controllable
homogeneous systems in low dimension 141
A. Kadem
19. On preservation of action variables for satellite librations in
elliptic orbits with account of solar light pressure 151
I.I. Kossenko

20. An explicit solution of the (quantum) elliptic Calogero-Sutherland model 159
E. Langmann
21. An application of the Melnikov integral to a restricted three body problem 175
J. Llibre and E. Perez-Chavela
22. Reductions of integrable equations and automorphic Lie algebras 183
S. Lombardo and A.V. Mikhailov
23. Geometric reduction of Poisson operators 193
K. Marciniak and M. Biazak
24. Closed manifolds admitting metrics with the same geodesics 198
V. Matveev
25. A transcritical-flip bifurcation in a model for a robot-arm 209
H.G.E. Meijer
26. Alignment and the classification of Lorentz-signature tensors 215
R. Milson
27. Renormalization group symmetry and gas dynamics 223
S. Murata
28. Refined computation of hypernormal forms 229
J. Murdock
29. New order reductions for Euler-Lagrange equations 236
C. Muriel and J.L. Romero
30. Regularity of pseudogroup orbits 244
P.J. Olver and J. Pohjanpelto
31. Relaxation times to equilibrium in Fermi-Pasta-Ulam system 255
S. Paleari and T. Penati
32. Energy cascade in Fermi-Pasta-Ulam models 263
A. Ponno and D. Bambusi
33. On Birkhoff method for integrable lagrangian systems 271
G. Pucacco

4

34. Symmetry of singularities and orbit spaces of compact
linear groups 279
G. Sartori and G. Valente
35. Symmetric solutions in molecular potentials 291
L. Sbano
36. Variational approach to soliton generation and stability analysis of
multidimensional nonlinear Schrödinger equation 300
V. Skarka, N.B. Aleksic and V. Berezhiani
37. Differential invariants for infinite-dimensional algebras 308
I. Yehorchenko

Conference information

- Conference program 313
- List of participants 318
- List of communications 321
- Papers in previous SPT proceedings 326
